SUMMARY

As an Artifical Intelligence Engineering Student i am highly ambitious and driven person who constantly pushes himself to excel and embraces opportunities for personal growth in all areas. Since my high school years, I have actively participated in various social activities, never shying away from involvement. With an innate drive to constantly create and improve, I possess a strong impulse for innovation and development. Moreover, I have proven myself to be an effective leader, providing guidance and support to my teammates who accompany me on this journey.

SKILLS

- Java
- Python
- Communication
- Team Leadership
- Streamlit

EXTRACURRICULAR

TOBB ETU University Computer Society/Application Development Board   2023-present
President

As the president of the Application Development Club, which is one of the clubs under the TOBB ETU Computer Society, my responsibilities include motivating my team, distributing tasks, maintaining communication with them, developing web applications to enhance our skills, inviting alumni or renowned entrepreneurs to our university for events, organizing activities, and actively creating content on social media platforms.

PROJECTS

Earthquake Management System(Disaster Management Category, Teknofest)   2020

- My friend and I have created an affordable system, powered by Arduino, that detects vibrations in the initial seconds of an earthquake and provides alerts. It quickly sends SMS notifications of the registered individuals in the building to disaster rescue units in our country. We have integrated this system into a scale model house as a proof of concept.
